

SunH2O

FEATURES & BENEFITS

DESCRIPTION

SunStain SunH2O is a water-based stain. It is a proprietary blend of specialized water-soluble polymers and liquid pigments, designed for staining concrete or any type of cement overlay. A highly adhesive promoter has been added to the formula that gives SunH2O exceptional adhesion to concrete surfaces, giving it major advantages over competitive water-based stains.

SunH2O is typically applied with a pump-up sprayer to an existing concrete or decorative concrete surface.

FEATURES & BENEFITS

- Eco-friendly coloring effect
- Can be applied on plain concrete or any decorative overlay
- Has exceptional adhesion to surfaces
- Great for interiors in commercial and residential settings
- Stain can be layered and combined with different colors for a unique look
- Slip resistance agents may be added for safety
