

# SunBurn

## FEATURES & BENEFITS

### DESCRIPTION

SunBurn Burnishable Stain System provides a color solution utilizing nano-lithium based technology that colors and hardens the concrete. This provides durable long-lasting colors that will not flake, peel, or wash out. This is the ideal color solution for both commercial and residential projects and comes in a variety of colors.

**SunBurn is applied with a pump-up sprayer to add multiple coats of stain to get the desired color. If indoors, the floor is burnished between each coat.\***

\*To avoid a slippery surface, we do not recommend you burnish exterior applications.

### FEATURES & BENEFITS

- Creates a durable color that is chemically bonded to the surface
- This application hardens and protects the concrete; easy to maintain
- Available in both translucent and opaque color options
- Low-VOC, environmentally friendly, and has very little odor
- Resembles the look of polished concrete floors
- Provides protection against UV radiation, water intrusion, corrosion, and chemicals
