Component: Iron (III) Oxide

Prolonged inhalation (6 to 10 years) of iron oxide fume has been reported to produce changes in lung x-rays of exposed individuals. This condition, siderosis, is considered to be a benign pneumoconiosis that exhibits no adverse health effects. Siderosis has been observed among occupations such as arc-welders where iron oxide fumes are present. To the best of our knowledge, this condition has not been observed after prolonged exposure to iron oxide pigments.

Ingestion: May be harmful, gastrointestinal irritation

8. FIRST AID

Eyes: In case of contact, flush eyes with plenty of lukewarm water. Get medical attention if irritation develops.
Skin: In case of skin contact, wash affected areas with soap and water.
Inhalation: If inhaled, remove to fresh air. Get medical attention if irritation develops.
Ingestion: If ingested, do not induce vomiting unless directed to do so by medical personnel. Get medical attention.

9. SPECIAL PROTECTION INFORMATION

Respiratory Protection: The following respirator is recommended if airborne concentrations exceed the appropriate standard/guideline, NIOSH approved, air-purifying particulate respirator with N-95 filters.
Ventilation: Under normal conditions of use, special ventilation is not required.
Eye Protection: Chemical splash goggles or other approved safety glasses.
Skin Protection: No special skin protection requirements during normal handling and use.
