

CUSTOM SCORELINE EFFECT

WHEN MOTHER NATURE HAS IT'S
OWN PLANS FOR YOUR CONCRETE.

BEFORE

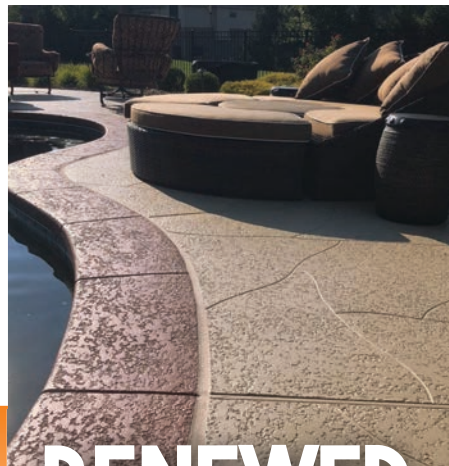

AFTER

WHAT IS THE CUSTOM SCORELINE EFFECT?

With the Custom Scoreline Effect, contractors use the existing cracks as a starting point and incorporate those into a new pattern. This is achieved by strategically scoring the surface by hand. SUNDEK authorized installers specialize in creating scoring patterns that make it nearly impossible to tell the difference between the original cracks and the handmade scorelines.

DURABLE

RENEWED

RESTORED

SUNDEK will turn the cracks in your concrete into art when you choose the Custom Scoreline Effect.

CONCRETE SURFACE

CRACK

A structural crack occurs where stress has developed in a concrete deck. These cracks then begin to move as the concrete heats and cools (expands and contracts). Trying to end this motion is expensive and ultimately unsatisfactory.

CEMENTITIOUS COATINGS

SCORE JOINT FILLED WITH FLEXIBLE MASTIC MATERIAL

During the early 1990's, SUNDEK invented a system that takes advantage of the natural movement that occurs along these lines rather than trying to "Mess with Mother Nature". These scorelines are placed directly over the cracks in the deck allowing them to move naturally. They are sealed with a flexible material to prevent moisture from penetrating the deck. SUNDEK professionals then complete the pattern with decorative scorelines in the uncracked portion of the deck.
