

SunOne

FEATURES & BENEFITS

DESCRIPTION

SunOne is a fast cure primer, body coat, and top coat with improved impact and abrasion resistance. SunOne is UV tolerant so it will not amber like traditional epoxies. SunOne polyaspartic is low VOC and can be installed in lower temperatures. If low odor, one day application, and improved performance is your goal, SunOne is your choice for a high-performance floor coating.

SunOne can be applied by brush or roller. An optional seeding of chips or quartz beads can be added. A second top-coat is then applied.

FEATURES & BENEFITS

- Rapid curing allows projects to be completed in a day
- Can be installed at surface temperatures from 20° F to 140° F
- UV stability prevents blushing or yellowing of coating
- Stain resistant, especially from hot tire marks, oils, and grease
- Higher abrasion resistance for greater durability and reduced maintenance
- Can be applied as a solid color tone or broadcasted with SunChip or SunFlek
