

SunAcid

FEATURES & BENEFITS

DESCRIPTION

SunStain SunAcid is a muriatic acid base coloring solution that creates a translucent modeled look by reacting with the minerals and salts in concrete. The coloration becomes a permanent part of the substrate and cannot crack or peel. SunAcid is used in a variety of interior and exterior architectural concrete applications.

SunAcid is installed by spraying the stain of choice with a pump-up sprayer over the decorative or plain concrete surface.

FEATURES & BENEFITS

- The stain becomes a permanent part of the substrate
- Will not crack or peel
- Unique look that cannot be achieved with conventional pigment type stains
- SunAcid can be used both interior and exterior
- Can be applied directly to plain concrete
- Slip resistant agents may be added for safety
