SunAcid • SunH<sub>2</sub>O • SunDye

*“Staining systems to enhance your raw or decorative concrete with unlimited choices of color and design!”*

# SunStain

## SunAcid reactive acid stain

An acid base stain solution that creates a translucent mottled look by reacting with the minerals and salts in the concrete. The stain becomes a permanent part of the substrate and cannot crack or peel.

SunAcid gives a unique look that cannot be achieved by using conventional pigment type stains. SunAcid is used in a variety of interior and exterior architectural decorative concrete applications.

## SunH<sub>2</sub>O water-based concrete stain

SunH<sub>2</sub>O is ideal for creating unique looks in many commercial and residential settings. SunH<sub>2</sub>O water based stain systems can be layered and combined with many different colors thereby creating totally customized looks not always possible with an acid stain.

Recommended applications include pool decks, patios, driveways, restaurants, showrooms, offices, home interiors and garage floors.

## SunDye liquid concrete dye (interior & exterior)

SunDye is used along with SunAcid, SunH<sub>2</sub>O or as a stand alone staining system. SunDye provides a fast drying and economical way to stain concrete. SunDye's ease of application, vibrancy of color and quick drying time make it a very popular choice to enhance concrete. Think of SunDye as "applying blush over foundation," enhancing the look by adding layers of color. SunDye is recommended for interior & exterior concrete applications such as: restaurants, bars, casinos, patios, pool decks, retail stores, living rooms, theme parks and garage floors.
