

Custom Scoreline Effect

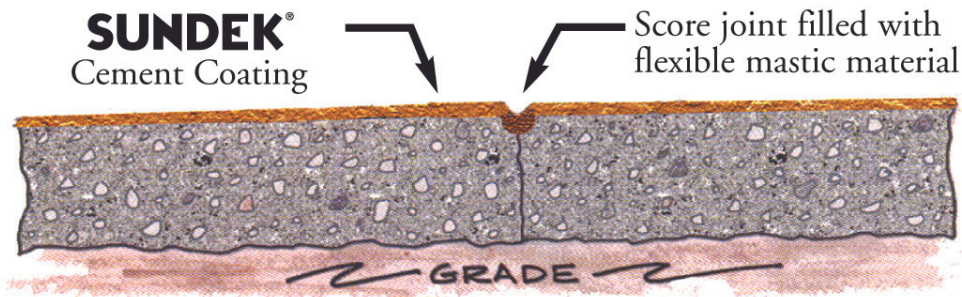

When Mother Nature has it's own plans for your concrete.

There are three guarantees with concrete...
It will turn gray.
It will get hard.
It will crack.

A structural crack occurs where stress has developed in a concrete deck. These cracks then begin to move as the concrete heats and cools (expands and contracts). Trying to end this motion is expensive and ultimately unsatisfactory.

During the early 1990s, SUNDEK invented a system that takes advantage of the natural movement that occurs along these lines rather than trying to "Mess with Mother Nature." These scorelines are placed directly over the cracks in the deck allowing them to move naturally. They are sealed with a flexible material to prevent moisture from penetrating the deck. SUNDEK professionals then complete the pattern with decorative scorelines in the uncracked portion of the deck.

SUNDEK will turn the cracks in your concrete into art when you choose the Custom Scoreline Effect.
