TERRA COTTA -----	19
SLATE BLUE -----	16
BRANDY WINE-----	15
SABLE-----	9

NOTE: Light reflective value (LRV) is the percentage of sunlight REFLECTED from the surface. The higher the LRV, the cooler the surface will remain due to the larger amount of light being reflected from the surface. A high LRV is helpful for areas that are in direct sunlight or may not be covered and prone to more heat from the sun.
